

National Energy Policy: What About Climate Change?

- ⇒ Ontario and Quebec seek to promote interprovincial trade in clean energy
- ⇒ Alberta seeks transit for fossil fuels to foreign markets
- ⇒ BC is at a crossroads, expanding its clean energy, but also exporting coal and seeking to develop a liquefied natural gas (LNG) export industry

A “National strategy” may appeal to Canadians, but we must confront the incompatibility between the different goals and visions in a world increasingly threatened by climate change.

Join us for an evening of information & discussion with **Kathryn Harrison**, author, activist, engineering graduate and UBC professor of political science.

Dr. Kathryn Harrison is a professor of Political Science at UBC. She has a Bachelor's degree in engineering (UWO), Master's degrees in political science and chemical engineering (MIT), and a Ph.D. in political science (UBC). Before entering academia, she worked as a chemical engineer in the oil industry, and as a policy analyst for both Environment Canada and the United States Congress. Dr. Harrison is the author or editor of several volumes, the most recent of which is *Global Commons, Domestic Decisions: The Comparative Politics of Climate Change*, and has published widely on climate and environmental policy. Frustrated by policymakers' rejection of both experts' and voters' advice, she has become increasingly active in two volunteer NGOs: UBCC350 and Voters Taking Action on Climate Change.
